

COMING IN 2022!

NERD Symposium

ETTN's Inaugural N.E.R.D. (Networking, Education, Resources and Development) Symposium will be held in 2022 at the NEW SEMA Garage in Detroit, Michigan. This multi-faceted, 3-day event is designed specifically for engineers and product designers at your company. There will be a day of activities touring and utilizing the new SEMA Garage in Detroit's many capabilities, followed by 2 days of rotating meetings where attendees will have access to a wide range of service providers to ask questions and develop contacts. These service providers will be everything from testing labs to tool/machinery manufacturers to intellectual property protection experts. Along with these meetings, there will be in depth trainings and keynote speakers digging deep into some of the hottest topics in the industry today. Most importantly, the networking opportunities for attendees to build a support team to lean on with questions or advice throughout the following years will be abundant. The symposium will end in conjunction with a Grand Opening Reception for the SEMA Garage!!

Networking Opportunities

ETTN will be hosting in-person networking opportunities in 2022. The ETTN Select Committee knows that our members have missed so many opportunities to connect on current projects, new trends and challenges that you are experiencing. To help keep you engaged with each other and continue to provide a solid peer networking, ETTN will be having several mixers in 2022 at key industry events! Stay tuned for more information

ETTN Virtual Series

ETTN is creating a virtual education series designed especially for our members! It will be focused on a deep-dive into the world of automotive engineering in bite-size segments. If that interests you, then ETTN's Education team has a treat for you. We've arranged for the industry's best talent to give real world talks with topics for modern engineers to enjoy, ranging from the latest EV technology to advanced internal combustion engine designs and emissions treatment systems. These talks are powered by the best in the industry, about 30-45 minutes long with the unique benefit of giving you access to our expert speaker Live to answer your questions after the talk. There are two unique and beneficial aspects of these presentations: the in depth-technical discussions are far greater than other sessions out there and the speaker will be live during the pre-recorded presentation to answer questions and chat during the presentation. Powered by SEMA's Emerging Trends and Technologies Network, these sessions are free for members and you can't find them elsewhere.
