

SEMA'S COMMITMENT TO EMISSIONS COMPLIANCE

Our Commitment

As part of its responsibility to its members, the Specialty Equipment Market Association (SEMA) has a long-standing commitment to ensuring that all performance enhancing parts used on the road are emissions compliant. SEMA's comprehensive offering of tools, services, and learning materials provide our members with certainty their parts meet U.S. Environmental Protection Agency (EPA) and California Air Resources Board (CARB) emissions standards.

Our Offerings

The SEMA Garage is a complete product development resource for manufacturers. The Garage provides access to high-tech tools and services including assistance with all aspects of emissions testing and compliance to demonstrate that vehicles will remain emissions-compliant after a product is installed.

SEMA GARAGE

Located in Plymouth, Michigan and Diamond Bar, California, SEMA's automotive emissions laboratories enable our members to test their products at an affordable cost. The SEMA Garage performs all tests required to obtain a CARB Executive Order (EO) and/or SEMA-Certified Emissions documentation to certify that a product does not increase emissions compared to an original equipment manufacturer (OEM) part for gasoline and diesel vehicles. Services also include OEM-provided CAD/CAM drawings (Tech Transfer), Measuring Sessions/Installation Center, 3D Printing/Rapid Prototyping, and Emissions Lab & Vehicle Dynamometer testing.

SEMA CERTIFIED-EMISSIONS

SEMA developed the SEMA Certified-Emissions program as an option for members to demonstrate that their products are emissions compliant. Generally, any product that affects airflow into or out of an engine, impacts the containment or delivery of fuel, or affects the functionality of an emissions control system or device must demonstrate emissions compliance to be considered legal for street use. This includes, but is not limited to, intake systems, exhaust components, tuning products, intercoolers, turbos, and superchargers.

BUSINESS ASSISTANCE

The SEMA Garage has helped aftermarket businesses gain CARB approval for over 600 EOs. Over half of the EO applications submitted each year come from the SEMA Garage.

SEMA'S COMMITMENT TO EMISSIONS COMPLIANCE

SEMA has invested **over \$20 million** to help our member companies and other aftermarket businesses to test and sell emissions compliant products.

The SEMA Show, the largest trade show in North America in 2022, features educational sessions on how businesses can comply with emissions laws. SEMA also provides our members with guidance through our monthly magazine and weekly electronic publications.

About SEMA

SEMA was founded in 1963 by automotive enthusiasts who turned their passion for modifying vehicles into a thriving industry. Today, SEMA represents over 7,000 member companies that employ more than 1 million Americans. The \$50.9 billion (annual) specialty-automotive industry produces and sells products that upgrade the appearance, performance, comfort, convenience, and technology in motor vehicles. The association puts on two of the top trade shows in North America—the SEMA Show in Las Vegas, Nevada, and the Performance Racing Industry (PRI) Trade Show in Indianapolis, Indiana—and provides training, product development support, market research, and legislative advocacy to its members.
